Mr. HR

Braintrust Ltd.

Dhaka, Bangladesh

Dear Mr. HR,

The AI Training position at Braintrust presents an exciting opportunity to apply technical expertise in programming languages—particularly C++, along with Python, Java, and JavaScript—toward the development of advanced AI models. Currently pursuing a BSc in Computer Science and Engineering, academic coursework and hands-on projects have strengthened capabilities in Algorithm design, Data structure, OpenGL.

Specific proficiency in C++ has been demonstrated through coursework and project work, with a focus on writing efficient, high-performance code. Professional experience includes back-end web application development, database managements and building scalable solutions. Version control collaboration via Git has reinforced disciplined coding practices and the ability to deliver clean, maintainable implementations—qualities critical for AI training and code evaluation tasks.

The position's focus on assessing AI-generated outputs, creating technical summaries, and optimizing code performance aligns well with both current competencies and academic trajectory. Braintrust's innovative work in AI presents an ideal environment to contribute these skills while further developing expertise in machine learning applications.

Attached additional details regarding qualifications in the resume. Would appreciate the opportunity to discuss how this background could support your team's objectives. Please feel free to request any supplemental materials needed for your review.

Sincerely

Abrar
